**PROBLEM TO BE SOLVED:** To obtain correct data from signals having a low S/N ratio for a demodulation method and a demodulation device in which analog signals obtained by reading information stored in a recording medium are converted into digital signals, demodulated and data are generated to express the information.

**SOLUTION:** An over-sampling is conducted by an A/D converter 103A, digital signals synchronized to an original clock are reproduced by an interpolation operation and maximum likelihood detection, RLL decoding and ECC operations are conducted.
